

## Eriks Unveiling Gates Hydraulic Crimpers for Just £1... At Hillhead 2010

ERIKS is unveiling major special offers on Gates crimpers at Hillhead 2010. Under the terms of the offers, if any Hillhead visitor signs up for £2,800 of hose, couplings and die self-assembly stock, ERIKS will sell them an MC1001 portable lightweight crimper, worth over £1000, for just £1. Should the investment in hose, coupling and die self-assembly stock, extend to £4,500, then the visitor benefits to an even greater degree, receiving - for just £1 - a powerful MCX 20 crimper, worth over £2000.

"Our special offer for Hillhead 2010 is designed to introduce quarry maintenance personnel to the benefits of a system that can make factory- quality, leak- free hydraulic hoses, onsite, in around five- minutes, and at a fraction of the cost of a van- based service," said Richard Ludlam, Marketing Manager for ERIKS UK. "The Gates crimpers are quick and easy to use, and provide an extremely cost effective means for quarries to improve their profitability, by reducing the costs associated with unplanned downtime."

Portable, light, and powerful, the MC 1001 and MCX 20 crimpers provide an economic, long term solution to the problem of expensive lost production in quarries, as a result of hydraulic hose failures.

They enable quarry personnel to produce factory-quality hydraulic hose assemblies in minutes, anywhere, anytime, consistently, and without time consuming trial-and-error.

Suitable for crimping everything from low- pressure return line to high-pressure four-spiral hose, the Gates crimpers offer the advantage of being grease free, so they do not attract quarry dust. They are custom-designed to work with Gates Global range of hoses and couplings, using die sets that are characterised by a proprietary profile design for an optimal cylindrical crimp.

The dies are logically organised to facilitate die selection, time- after- time, and are tried, tested and validated to provide the most optimal crimp settings. The validation settings cover the complete Gates Global hose and coupling product range, so there is no need for time consuming trial-and-error to find the ideal settings. Moreover, when Gates hoses and couplings are crimped by Gates' crimpers range, in accordance with Gates' optimal crimp data, they yield factory-quality assemblies fully compliant to European Directives and legislation, exceeding all international standards.

## About ERIKS UK

We offer over 90 years technical knowledge and experience from 76 nationwide industrial service centres, supplying over 500,000 unique industrial products. We have 88 integrated on site stores and procurement centres reducing the costs of all maintenance and repair products and industrial services. With 9 core competence centres and 23 fully equipped repair workshops maintaining equipment from electric motors, pumps, gearboxes, generators, transformers through to condition monitoring based preventative maintenance services, such as thermography, air leak surveys and vibration analysis.
