

KM Tools Limited enjoys talking bespoke machines and components at SubCon 2019

KM Tools Limited has enjoyed a successful show at SubCon this year. The technical sales team met with a wide range of experts in manufacturing and discussed refurbishing existing machinery as well as significant interest in manufacturing new bespoke machines and production equipment.

As the UK's premier subcontract manufacturing supply chain show, SubCon this year welcomed businesses from over 20 different countries, with many interested to see how KM Tools could enhance their production operations.

Adam Sutton, Engineering Production Manager at KM Tools, enjoyed the experience: "First of all, I'd like to thank everyone who visited us throughout the event, it was a pleasure to talk through your machine requirements.

We had some great engagement during the show, with plenty of enquiries and discussion with some interesting contacts. Our service can adapt to meet the needs of companies looking to overhaul a single manufacturing machine, to providing totally bespoke machines, to supporting entire OEM production lines with dedicated machine maintenance services. This meant we could discuss machine projects of various sizes across industry. We had many enquiries regarding our machined components and tooling, which we can manufacture in-house in almost any quantity from customer design or reverse engineering. We're currently following up leads, but we are very happy with the positive response."

KM Tools offers its service across the engineering sector, backed by 25 years of experience in delivering high performance machines. The business is a full electro-mechanical service provider, able to carry out machining, fabrication and instrumentation as required. Design offices at the manufacturing centre coupled with extensive machine capacity ensures reduced lead times and repeatable quality. In-house capability further translates to highly competitive prices, with the option of new build or total refurbishment giving customers with varying budgets flexibility of approach.

"For anyone who didn't have a chance to meet with us at the show, you can get in contact if you're looking for a turnkey machine service provider to improve the efficiency of your specialised equipment, or, you can now visit our virtual exhibition stand which is open 365 days at <https://kmt.tools> " Adam concludes.

About KM Tools Ltd

KM Tools Ltd (KMT) specialises in manufacturing, maintaining and renewing specialised machines used for the manufacture of automotive components, with a specialist focus on emission control (Exhaust, CAT & DPF) product manufacture.

Its machines are used by leading brand manufacturers building parts for the OE market and the automotive aftermarket across the globe. Our manufacturing and service centre is based in a purpose built facility the Midlands from which it manufactures, services and rebuilds and supports hundreds of individual machines.

KMT can service, support and re-manufacture most machines from any original manufacturer, including one-off custom designs. It also develops tooling and workholding solutions such as bespoke automated, or semi-automated mandrels, jig and fixturing systems.
